

Before and after photos
Diffuse knapweed control on two *Larinus minutus* release sites

Site 1: Before

Site 1: After

These are before and after photos of two sites. *Larinus minutus* was released at Site 1 in 1999 (upper left) and at Site 2 in 1998 (lower left). Recent photos (above and below right) of each site shows a marked decrease of diffuse knapweed. *Note: The seed-feeding weevil does not always yield significant results as shown in these photos.*
